

Traffic Deaths of Native People Compared to Other Heritages

Population Representation Comparison of census and traffic fatality population proportions

- Approximately Equal
- Native Overrepresented
- Native Underrepresented
- Reservations
- Native Traffic Fatality

This map compares the Native American/Alaska Native census population data with NA/AN traffic fatality data. Red dots are NA/AN traffic fatalities from crashes 2005-2014 inclusive. Anecdotally, underreporting of traffic crashes is significant in some regions and time periods, creating an incomplete picture.

Each county is labeled with the census data showing a percent of the population that has NA/AN heritage. The numbers in red, blue, or green show the percentage of the traffic crash population, by county, that are of NA/AN heritage. This heritage determination is made by the medical examiner's office, most frequently as reported by the next of kin.
